

Project Manager

Liquefy Limited

Liquefy is a venture and corporate backed Fintech startup based in Hong Kong. Leveraging blockchain technology, our end-to-end technology solution is used by asset owners such as real estate developers, closed-end funds or even esports manager to tokenize their assets, enabling investors to participate in investments that they could not gain access to. Liquefy has been covered by multiple international and local medias such as SCMP, NASDAQ, HKEJ and Ming Pao. Liquefy is founded by a team of investment bankers, asset management professionals, technology entrepreneurs and lawyers. For more information, please visit www.liquefy.com.

Liquefy's Technology Delivery Team consists of professionals specialised in hands-on system design who utilize blockchain technologies to deliver systems for our clients. This role will be reported to the Chief Product Officer.

Key Responsibilities:

- Develop detailed project plan to monitor and track progress, by coordinating with the Technology Delivery Team and Business Team.
- Assist in the definition of project scope and objectives, involving relevant stakeholders and ensuring technical feasibility.
- Deliver projects on-time, within scope and budget.
- Meet with clients to collect specific requirement of each project.
- Measure project performance using appropriate tools and techniques.
- Ensure project progress is well articulated among all stakeholders.
- Build and maintain rapport with cross-functional colleagues.

Skills Required:

- Preferably project management experience in designing & implementing enterprise applications, ideally blockchain-based applications.
- 2+ years of experience in project management or related roles.
- Ability to cooperate with clients with effective project management, communication, and stakeholder management skills.
- A high degree of comfort to speak with internal teams with good presentation skills.
- The ability to adapt quickly to new technologies.
- Degree in Computer Science, Computer Engineering, Information Technology, or relevant degrees from a university; Business-related degrees with good understanding of technologies will be considered.
- Excellent communication skills in English (Mandarin proficiency is a bonus).
